

Apex Group Restores Dickies Arena Terrazzo Flooring with the Ameripolish® SmartFloor™ System

Scan here to view the video

SITUATION:

At Dickie's Arena in Fort Worth, Texas, the once-beautiful terrazzo floor polish had become worn and dulled from regular wear and tear. The constant foot traffic and expected damage in a facility of this size made it nearly impossible to maintain a consistent, polished appearance. The facilities team needed a complete system that could not only restore the floor's finish but also make it easier to keep it looking at its best, without the constant need to apply topical sealers or stripping and waxing.

The facilities team awarded Apex Group with the terrazzo restoration project at Dickies Arena to deliver a high-end, mirror-like finish that would last without the ongoing need for topical sealers and/or stripping and waxing. The existing polishing methods required frequent maintenance and reapplication, which increased costs and downtime.

During a visit with Apex, Richard Hill from Aramsco Dallas saw an opportunity to introduce a more efficient system that would produce the results the facility was looking for.

"When Apex was awarded the job, I recommended they consider the Ameripolish® SmartFloor™ GPR Polishing System," said Hill.

"The system is known for its ability to achieve a high-end aesthetic, with a durable, long lasting result, all while being faster than traditional systems and creating a seamless transition to long-term maintenance."

SOLUTION:

To demonstrate the system's capabilities, Hill coordinated a live presentation and on-site demonstration with Jeremy Hoang from Ameripolish. The team immediately saw the advantages of the SmartFloor™ Maintenance Program, particularly its ability to deliver a highly reflective, mirror-like, long-lasting finish without relying on topical sealers.

"Throughout the process, feedback from Apex team members Mark and his crew was overwhelmingly positive. Not only did they achieve superior results, but they also completed the project ahead of schedule." Richard Hill, Sales Manager, Aramsco Dallas

On project kickoff day, Ameripolish representatives were on-site to provide hands-on support and ensure a smooth transition from Apex's traditional polishing methods. The Apex team quickly adapted to the system, using:

- SmartFloor™ Refinement GPR Series 1, 2 and 3
- SmartFloor™ Refinement GPR Handgrind Pads (1, 2 and 3)
- Ameripolish® SR2 Plus
- Ameripolish® G3 Burnishing Pad

RESULTS

The collaboration exceeded expectations. "The Apex team quickly adapted from their traditional polishing methods, significantly boosting productivity," said Hill. "Throughout the process, feedback from Apex team members Mark and his crew was overwhelmingly positive. Not only did they achieve superior results, but they also completed the project ahead of schedule."

Dickies Arena management was equally impressed with the outcome and has since adopted the SmartFloor™ Maintenance System as its long-term maintenance solution. As part of the ongoing maintenance program, the team uses SmartFloor™ Daily Maintenance - Green Pads and Rejuvenating Cleaner to maintain the polished finish delivered by the GPRs. The system was easy for the internal janitorial and facilities staff to adopt immediately. They began using these products the first day after restoration and continue to self-perform to maintain the beautiful finish.

By eliminating the need to reapply topical sealers, they can reduce labor and material costs while maintaining the arena's pristine appearance. This collaboration highlighted how the Ameripolish® SmartFloor™ System delivers measurable performance, long-term value and results that distributors, contractors and facility managers can count on.
