

## Polished Concrete System

### *Our Story:*

Ameripolish is the industry leader in the innovation of concrete chemical technology. Founded in 2005, Ameripolish revolutionized the concrete polishing industry by introducing solvent based, concrete penetrating dyes. Since then, the Ameripolish product development team has unfolded, on an annual basis, new and exciting, cutting edge technology to prep, strengthen, color, protect and maintain polished concrete floors. Ameripolish was founded with the intention to provide the absolute best architectural concrete products on the market and to advance the industry by continually pushing the envelope through research and development.

With Ameripolish Densifiers, Dyes, and Stain Protectors  
Anything is Possible

### 3D HS - Densifier

Ameripolish 3D HS™ is an easy-to-use blend of reactive silicates and additives providing enhanced densification and stain resistance. 3D HS™ high solids formula is ideal for use on open, or porous concrete that will readily accept densifier (for non-porous floors use 3D HSL™) and works equally well on both new and existing concrete. 3D HS™ is especially effective at resisting stains when used in conjunction with Ameripolish SR2™ sub-surface stain protectant.

### Ameripolish SureLock Dye

Ameripolish® SureLock Dyes are versatile colorants for polished concrete that mix with water or Ameripolish® ColorSolve™. SureLock Dyes are to be applied just before densifying with 3D HS or HSL, helping the color penetrate and chemically bond to the concrete. The pre-dissolved concentrate liquid is fast and easy to use. The formula includes UV stabilizers to resist fading as well as a penetrating agent to eliminate further mixing and develop deep, rich colors even on hard, dense concrete.

SureLock Dye is available in 22 different stock colors

## SR2 Stain Resistor

Because SR2 leaves no topical film, and is fully penetrating the surface, it suspends water & chemicals for fast and easy clean-up minimizing etching.

Ameripolish SR2 is a penetrating stain repellent specifically formulated to protect polished, dyed, and non-dyed concrete from oil, water-based stains, and acidic etching agents. The water and oil repelling qualities of SR2 provide superior stain protection on most substrates. SR2 can be used as a standalone product but, to obtain optimum performance, is recommended for use with Ameripolish 3D HS or 3D HSL Densifiers.

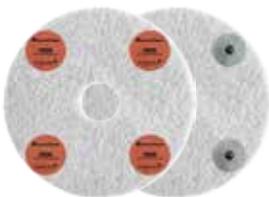

## SmartFloor™ Maintenance System

The SmartFloor™ concept is engineered to provide the end user with a highly aesthetic floor and an easy and economical way to maintain a polished concrete floor utilizing standard janitorial equipment and existing personnel. The SmartFloor™ Pad System consists of DOI Inserts for daily maintenance and Stain Remediation Inserts (SRI) for remediating etches and stains from polished concrete floors. The SmartFloor™ Pad System Inserts are made of unique diamond agglomerate technology that maintain a highly-refined floor without ongoing stock removal and also successfully remediate etches and stains.

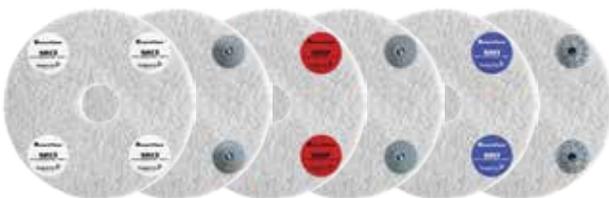

SmartFloor™ is only usable with Ameripolish SR2 due to its fully penetrating nature. SmartFloor™ Pads are composite resin abrasives that clean and hone the surface on a daily basis to provide the floor with its highest possible DOI even after the installer has left.

**DAILY  
MAINTENANCE**

**STAIN  
REMEDICATION**

## Polished Concrete System

### *Benefits of Ameripolish System:*

- Great for new or existing concrete
- Surface will wear better, and last longer
- Enhanced gloss, clarity, and DOI (Distinctness of Image)
- Customize your concrete with any of our colors
- Penetrating sealer SR2 allows surface the “breathe” and does not trap moisture
- Excellent stain repellency and chemical resistance in commercial and industrial applications
- Cost-effective maintenance system designed for use with an automatic scrubber, providing a daily maintenance solution along with a stain remediation process
